

Rooting for Biodiversity: Jentayu Sustainables' 4,000 Tree Contribution to Sook Nursery at Hutan Simpan Sook Lake, Keningau Sabah.

At Jentayu Sustainables, we love trees! That's why we recently contributed 4,000 of them at Hutan Simpan Sook Lake, Keningau, Sabah. We carefully selected species that can thrive in the local soil and climate, helping to maintain the area's unique biodiversity.

We provided three varieties, each with a special role in our ecosystem:

The mighty Mahogany tree, with its sturdy, beautiful timber, doubles as a cozy home for local wildlife.

The Gagil, a tropical gem native to the region, provides high-quality timber for construction.

The Selangan Batu tree, a local superstar, nourishes and shelters a variety of birds and insects, contributing to a balanced, thriving habitat.

We didn't do this alone! The Sabah Forestry Department was our guide, helping us choose the right trees to maximize our impact. This was a giant step in our ongoing fight against deforestation and our push for biodiversity conservation.

The trees aren't just pretty to look at; they're also hard at work as natural habitats and carbon catchers, helping to soften the blow of climate change.

But we're not done yet! We're excited to expand our tree-planting efforts and partner with others who share our green vision. We're determined to keep reforestation, promoting sustainable practices, and raising environmental awareness in our community.

By working together, we can all play our part in ensuring a healthier, greener future for generations to come. Join us in our green adventure!
